

Nu-Energie Makes Biodiesel the “New-Fashioned Way” - With Digital Technology

March 01, 2008

FOR IMMEDIATE RELEASE

Blountville, TN. – Nu-Energie, a biodiesel production and technology company based in Blountville, TN has decided to go “all digital” in its new 15 million gallon plant in Eastern Tennessee. Among other cutting edge features, the plant will include a Siemens PCS 7 digital control system that allows the operator to control the massive plant from one touch screen interface. “We actually can run the whole system with one person,” said Nu-Energie’s CEO, Brian Hulette. “But for safety reasons, we always have at least two people on site. The Siemens system can open and close valves automatically anywhere in the production line. More importantly, it allows us to monitor the quality of the biodiesel fuel that we are producing to obtain the best possible quality for our customers.”

Nu-Energie monitors its biodiesel fuel quality with a state of the art Cognis fuel testing system. The system allows Nu-Energie to take product samples, send data over the Internet to world class certified labs, and obtain exact test results in seconds. “The Cognis system brings the lab to us, “ said Nu-Energie’s CFO Joel Day. “It was expensive, but it’s worth every penny to insure continuous high quality fuel, and to not have to wait days for test results like most plants do.”

Nu-Energie will soon be moving further down the high tech trail with a new biodiesel reactor designed and developed with Oak Ridge National Laboratory. The still secret reactor has nothing nuclear about it, but it borrows from Oak Ridge’s nuclear technology to provide highly efficient biodiesel production in a

small, digitally-calibrated vessel. “We can’t wait to get that reactor in here. We believe it will revolutionize biodiesel production worldwide,” said Hulette. “We’re bringing the very latest technology to East Tennessee to produce clean biofuels and to create highly skilled jobs for the community, and we are happy to do it.”

About Nu-Energie

Nu-Energie, LLC is a biodiesel technology and production company, headquartered in Blountville, TN. For more information, please see the company’s website at www.nu-energie.com.
